Scroll down for an alphabetical list by drug name.

*Currently there is legislation pending with the FDA for Gluten to be identified on all foods and drugs. As it is now, manufacturers don't have to disclose this and there is no real regulation. Right now, they only have to identify, wheat, milk, eggs, soy, shellfish, fish, nuts, peanuts.

-The problem for Celiacs is that Gluten also contains, rye, barley and oats!

-The problem for those who are Casein Intolerant is that Dairy Free does not mean it is Casein Free!

-We believe Corn should be on this list due to the # of customers who are allergic or reacting to it.

Is the Food That You Are Making and Serving Really Gluten or Allergen Free?

-Turn the page to see the list of ingredients that these problem allergens hide within.
